## PRODUCT DESIGNER | CREATING INTUITIVE, SCALABLE, AND BUSINESS-DRIVEN DIGITAL EXPERIENCES

Product Designer with 5+ years of experience designing scalable digital products across fintech, crypto, and enterprise platforms. I combine user insights, business strategy, and design thinking to create intuitive experiences that solve real problems. Passionate about collaborating with cross-functional teams to build products that are simple, impactful, and meaningful.

## MY DESIGN PROCESS

My UI/UX design process begins with in-depth research to understand user needs, followed by creative ideation to brainstorm solutions, transforming ideas into visually appealing designs, rigorously testing for usability, and refining through iteration to deliver a seamless and user-friendly experience.

**STEP 1**

**RESEARCH**

Understand user needs, market trends, and business goals.

**STEP 2**

**IDEATION**

Brainstorm ideas, create user flows, and sketch wireframes.

**STEP 3**

**DESIGN**

Develop high-fidelity mockups and interactive prototypes.

**STEP 4**

**TESTING**

Conduct usability testing and gather feedback.

**STEP 5**

**ITERATION**

Refine designs based on feedback and data.

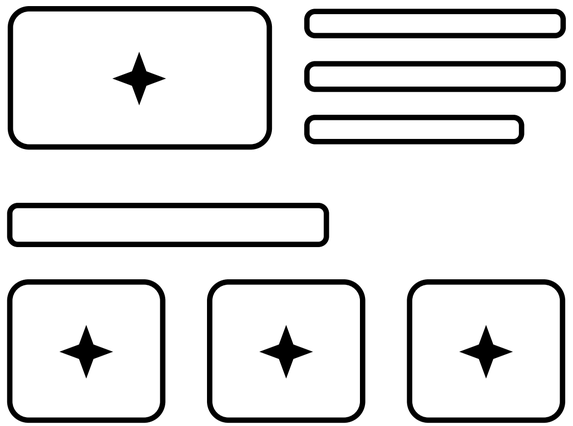

## WHAT I DO

As a Product Designer, I bridge user needs with business objectives by transforming complex problems into intuitive digital experiences. I collaborate closely with product managers, engineers, and stakeholders throughout the product lifecycle from discovery and research to design execution and validation. My work focuses on creating scalable, user-centered solutions that enhance usability, drive product growth, and deliver measurable value. The following projects showcase how I turn ideas into impactful products through strategic thinking, thoughtful design, and cross-functional collaboration.

# Project 1

UI/UX Design for PT AICC's Company Profile Website

## PROJECT BACKGROUND

AICC
PT.ASIAN ISUZU CASTING CENTER

- **Client**: PT AICC (Asian Isuzu Casting Centre). PT Asian Isuzu Casting Centre (PT AICC) is a leading manufacturing company specializing in the production of high-quality casting components, primarily for the automotive industry.

- **Objective**: The goal was to create a modern, user-friendly digital company profile to showcase PT AICC's services, portfolio, and values to potential clients and stakeholders.

- **Problem Statement** : The existing company profile was outdated, text-heavy, and not optimized for digital platforms, making it difficult for users to engage with the content.

## ROLE

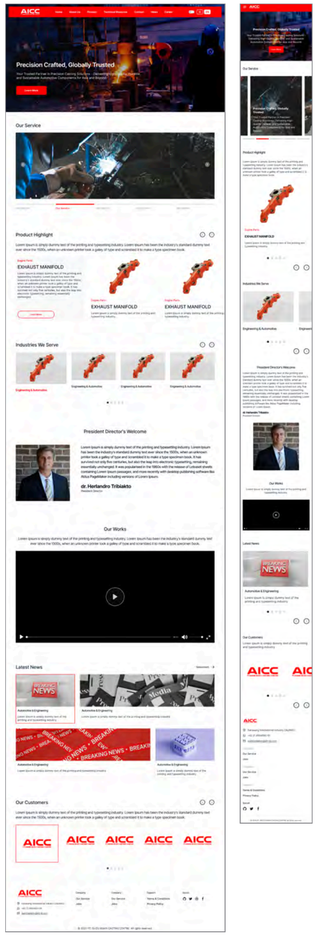

**Role**: UI/UX Designer

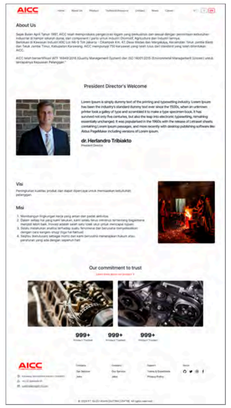

**Responsibilities**:

- Conducted user research to understand the target audience (stakeholders and clients).
- Designed wireframes and high-fidelity mockups for the digital company profile.
- Collaborated with the marketing team to ensure the design aligned with PT AICC's branding.
- Created an interactive prototype to demonstrate the user flow.
- Conducted usability testing to gather feedback and refine the design.

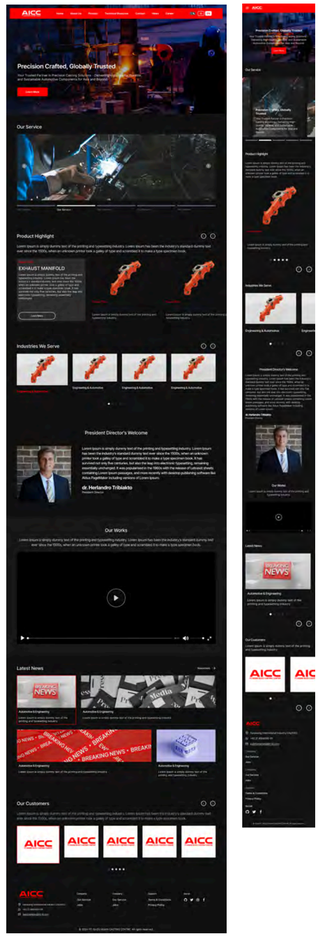

**Tools Used**: Figma, Google Workspace

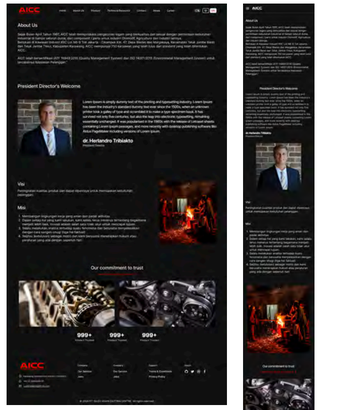

## FINAL DESIGN

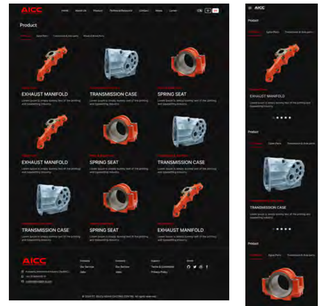

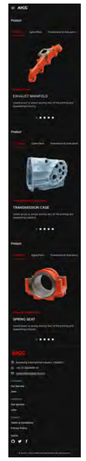

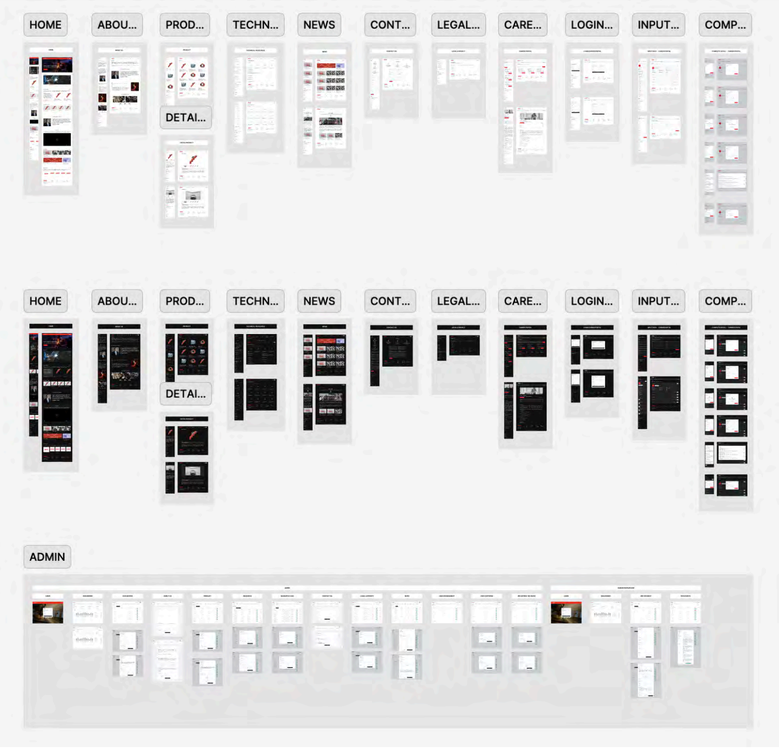

## UI/UX DESIGN FOR PT AICC'S COMPANY PROFILE WEBSITE

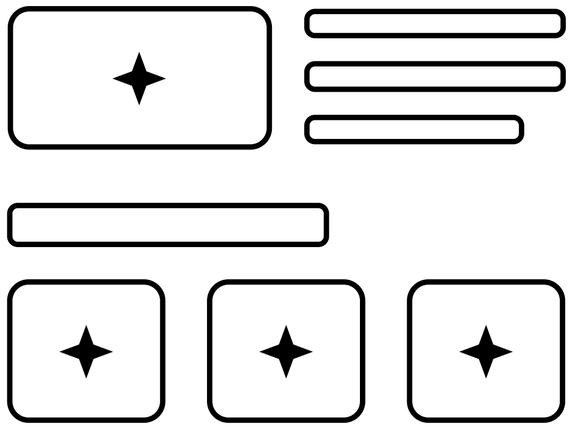

UI/UX Design for PT AICC's Company Profile Website" focuses on transforming PT AICC's online identity through a modern, user-centric approach. This project aims to create an intuitive, visually appealing, and responsive web design that reflects the company's professionalism and innovation. By prioritizing seamless navigation, engaging visuals, and optimized user experience, the website will serve as a powerful tool to enhance brand credibility, attract potential clients, and strengthen corporate communication in the digital era.

# Project 2

Designing a Property Marketplace App for Rumahbaru.co

## PROJECT BACKGROUND

rumahbaru.co

- **Client**: Rumahbaru.co. Rumahbaru.co is a forward-thinking property startup in Indonesia aiming to simplify the process of buying, selling, and renting properties.

- **Objective**: The goal was to design a user-friendly mobile and web application that allows users to easily browse, buy, sell, and rent properties while providing a seamless experience for both buyers and sellers.

- **Problem Statement** : Potential users faced challenges in finding reliable property listings, communicating with agents, and completing transactions efficiently. Rumahbaru.co wanted to address these pain points with a modern digital solution.

## ROLE

**Role**: UI/UX Designer

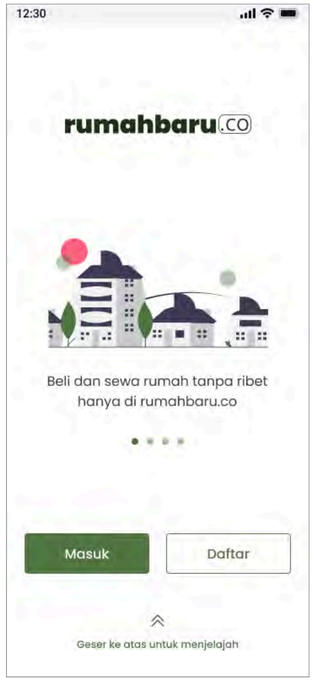

**Responsibilities**:

- Conducted user research to understand the needs of buyers, sellers, and renters.
- Designed user flows, wireframes, and high-fidelity mockups for the app.
- Created interactive prototypes to demonstrate key features and user interactions.
- Collaborated with developers and product managers to ensure feasibility and alignment with business goals.
- Conducted usability testing to validate design decisions and iterate on the solution.

**Tools Used**: Figma, Google Workspace

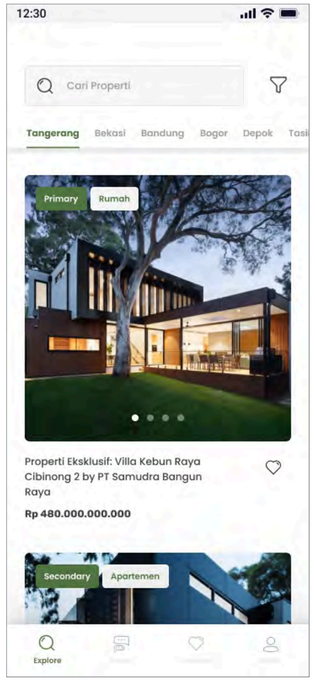

## FINAL DESIGN

## DESIGNING A PROPERTY MARKETPLACE APP FOR RUMAHBARU.CO

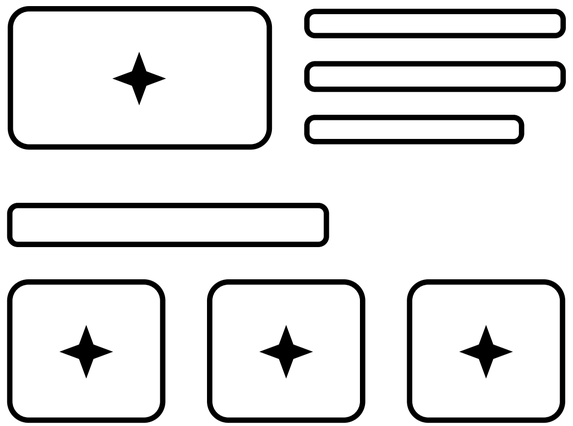

Rumahbaru.co is a forward-thinking property in Indonesia aiming to simplify the process of buying, selling, and renting properties. The company identified a gap in the market for a user-friendly, reliable, and efficient digital platform that connects buyers, sellers, and renters seamlessly.

As the UI/UX Designer for this project, I was tasked with designing a mobile and web application from scratch that would address the pain points of users and provide a modern, intuitive solution for property transactions.

# Project 3

Designing a Gym Management App for Obsidian Gym

## PROJECT BACKGROUND

OBSIDIAN

- **Client**: Obsidian Gym. Obsidian Gym is a premium fitness center offering state-of-the-art facilities, personalized training programs, and branded merchandise.

- **Objective**: The goal was to design a mobile application that allows users to easily register for gym memberships, manage their workout schedules, and purchase Obsidian Gym merchandise.

- **Problem Statement** : Members faced challenges in managing their gym activities, such as difficulty in registering for memberships, tracking their schedules, and accessing merchandise. Obsidian Gym wanted a digital solution to enhance member experience and streamline operations.

## ROLE

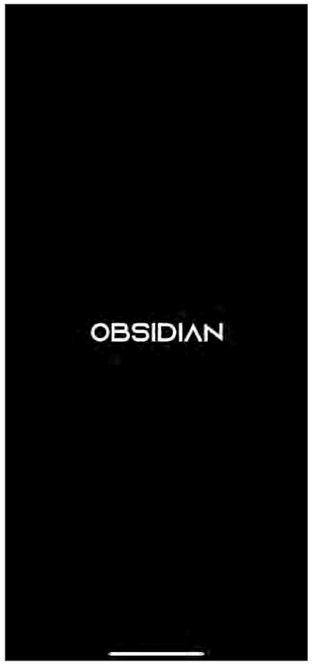

**Role**: UI/UX Designer

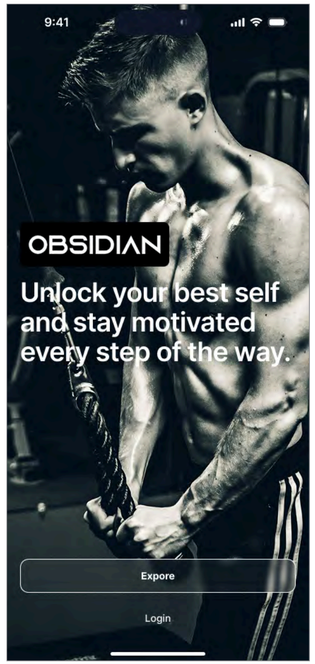

**Responsibilities**:

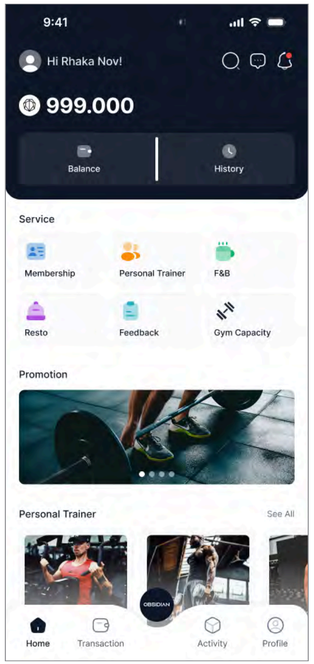

- Conducted user research to understand the needs of gym members and staff.
- Designed user flows, wireframes, and high-fidelity mockups for the app.
- Created interactive prototypes to demonstrate key features and user interactions.
- Collaborated with the gym's management team to align the app with their brand and operational goals.
- Conducted usability testing to validate design decisions and iterate on the solution.

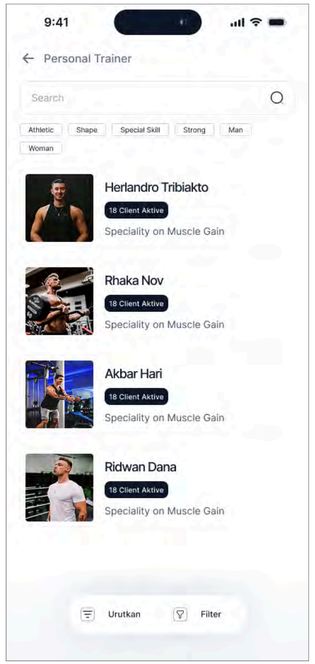

**Tools Used**: Figma, Google Workspace

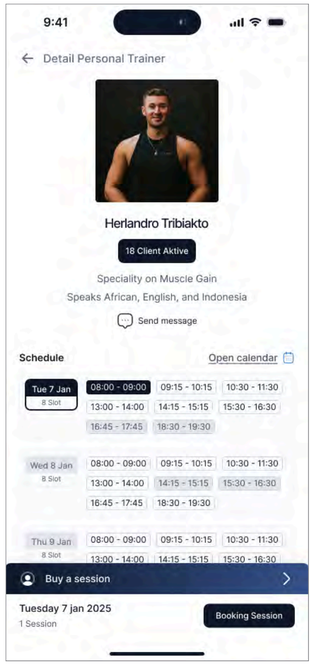

## FINAL DESIGN

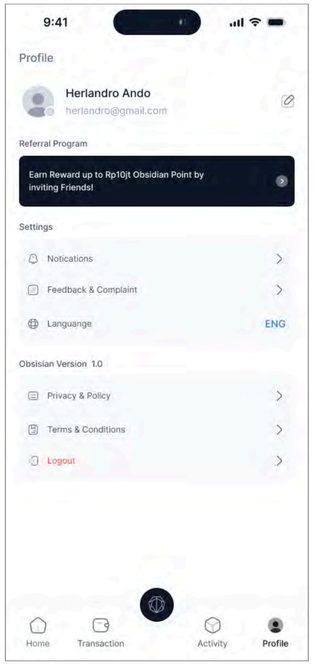

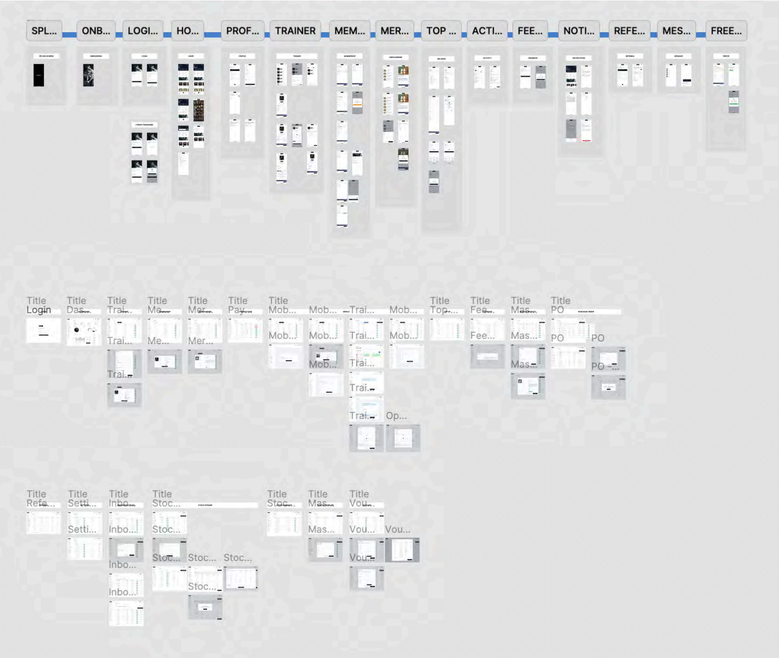

## DESIGNING A GYM MANAGEMENT APP FOR OBSIDIAN GYM

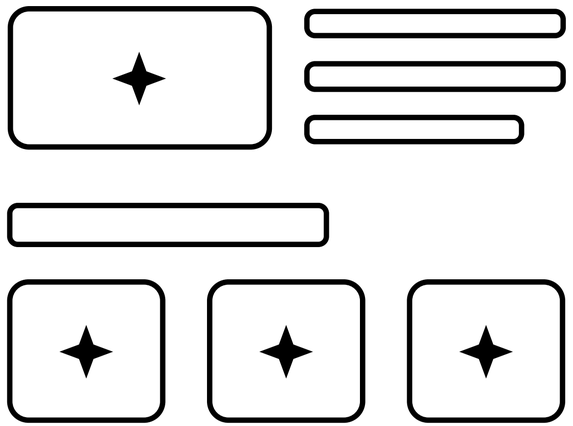

Obsidian Gym is a premium fitness center known for its state-of-the-art facilities, personalized training programs, and high-quality branded merchandise. To enhance the member experience and streamline operations, Obsidian Gym sought to develop a mobile application that would allow users to register for memberships, manage their gym schedules, and purchase merchandise—all in one place.

As the UI/UX Designer for this project, I was responsible for designing an intuitive and visually appealing app that meets the needs of both gym members and staff.

# Project 4

Designing a Ticketing and Schedule App for LRT Jakarta

## PROJECT BACKGROUND

LRT JAKARTA

- **Client**:  LRT Jakarta. LRT Jakarta is a light rail transit system serving the Greater Jakarta area, providing a fast, efficient, and eco-friendly mode of transportation.

- **Objective**: The goal was to design a mobile application that allows users to easily purchase tickets, view train schedules, and buy LRT Jakarta-branded merchandise, all while enhancing the overall user experience.

- **Problem Statement** : Passengers faced challenges such as long queues for ticket purchases, difficulty accessing real-time schedule information, and limited options for purchasing LRT-branded merchandise. LRT Jakarta wanted a digital solution to streamline these processes and improve passenger satisfaction.

## ROLE

**Role**: UI/UX Designer

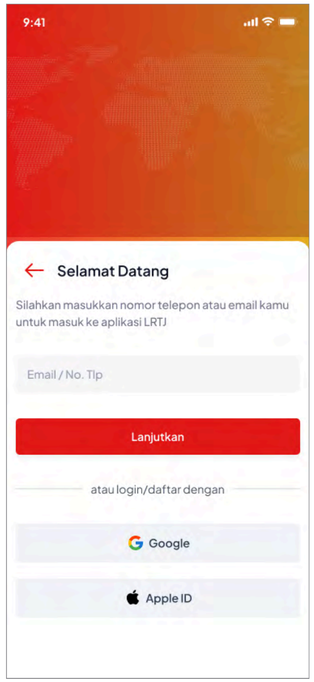

**Responsibilities**:

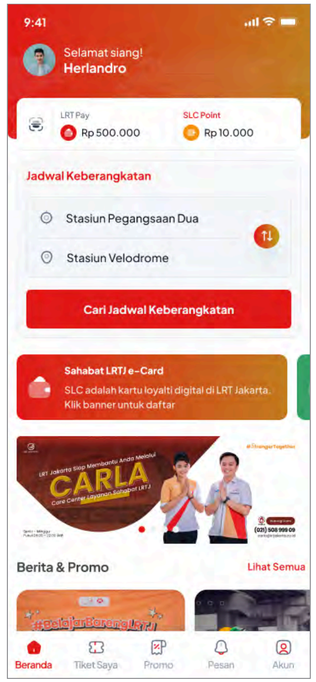

- Conducted user research to understand the needs of LRT passengers and staff.
- Designed user flows, wireframes, and high-fidelity mockups for the app.
- Created interactive prototypes to demonstrate key features and user interactions.
- Collaborated with LRT Jakarta's management team to align the app with their brand and operational goals.
- Conducted usability testing to validate design decisions and iterate on the solution.

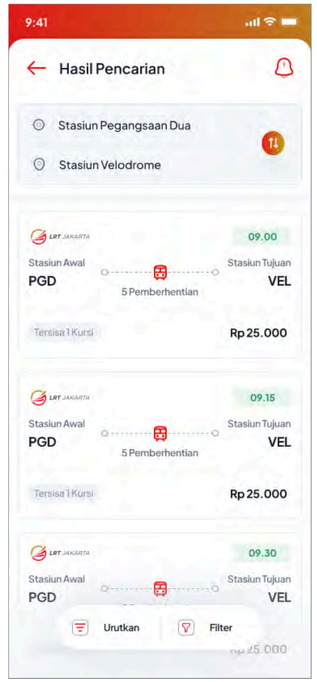

**Tools Used**: Figma, Google Workspace

## FINAL DESIGN

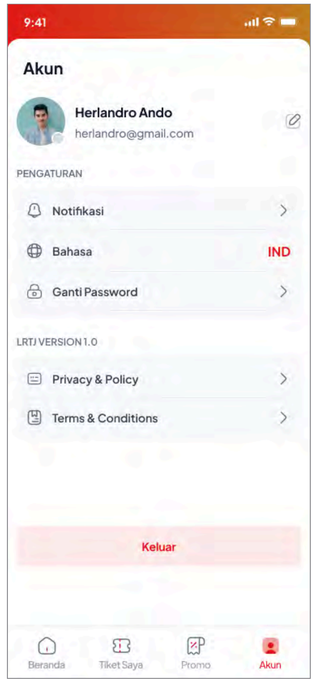

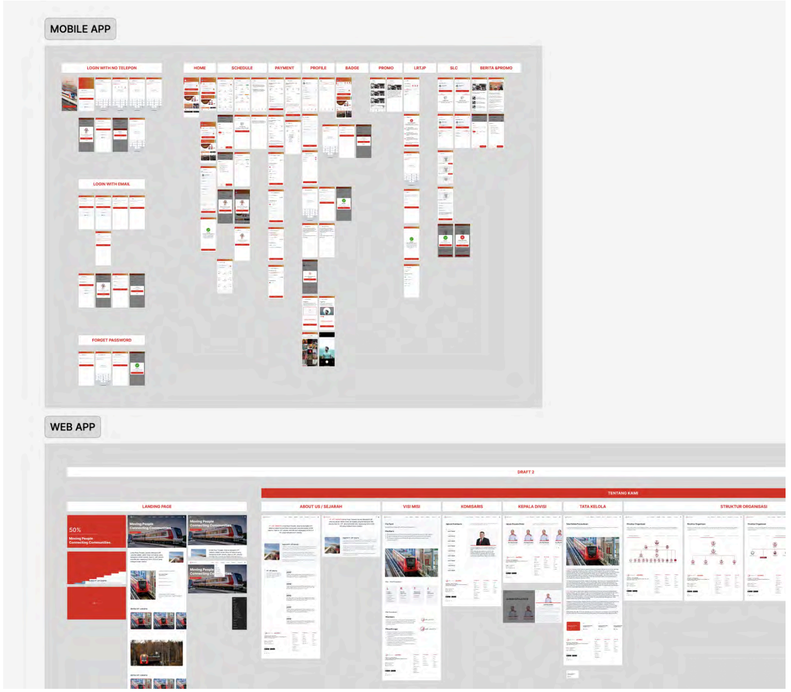

## DESIGNING A TICKETING AND SCHEDULE APP FOR LRT JAKARTA

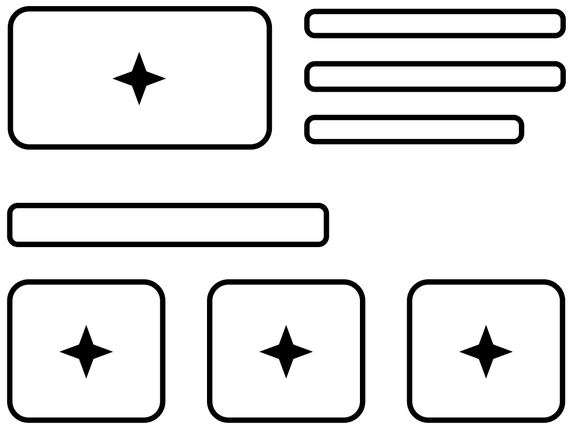

LRT Jakarta is a light rail transit system serving the Greater Jakarta area, providing a fast, efficient, and eco-friendly mode of transportation. To enhance the passenger experience and streamline operations, LRT Jakarta sought to develop a mobile application that would allow users to purchase tickets, view train schedules, and buy LRT-branded merchandise—all in one place.

As the UI/UX Designer for this project, I was responsible for designing an intuitive and visually appealing app that meets the needs of both passengers and staff.

# Project 6

Designing an Asset Management App – Trackpedia

## PROJECT BACKGROUND

- **Client**: Linkra. Linkra is a leading technology company specializing in innovative solutions for various industries. With expertise in industrial automation, IoT, software development, and telecommunication, Linkra is dedicated to enhancing operational efficiency and productivity.

- **Objective**: The goal was to design a web and mobile application that allows businesses to track, manage, and optimize their assets efficiently using IoT-enabled solutions.

- **Problem Statement** : Businesses struggled with manual and outdated asset management processes, leading to inefficiencies, lost assets, and increased operational costs. PT Linkra Wahana Teknologi wanted to create a digital solution that leverages IoT technology to provide real-time asset tracking and management.

## ROLE

**Role**: UI/UX Designer

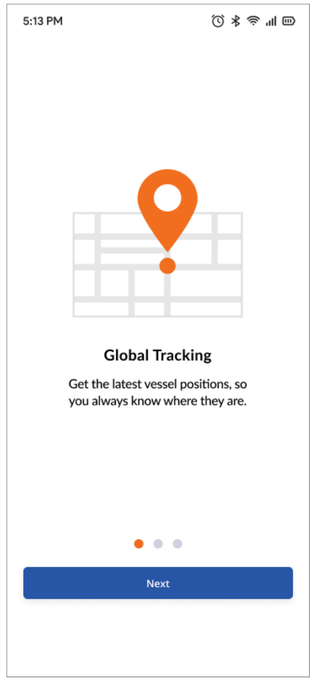

**Responsibilities**:

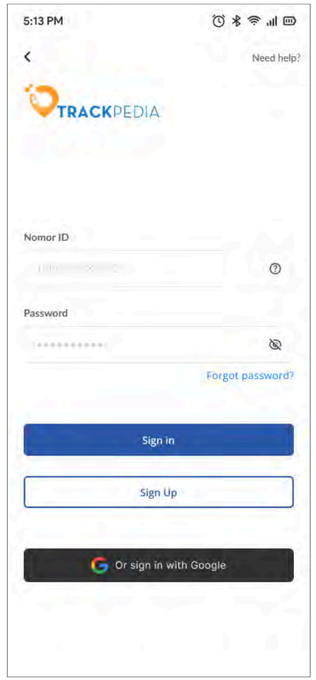

- Conducted user research to understand the needs of businesses and asset managers.
- Designed user flows, wireframes, and high-fidelity mockups for the app.
- Created interactive prototypes to demonstrate key features and user interactions.
- Collaborated with IoT developers and product managers to ensure the design aligned with technical capabilities and business goals.
- Conducted usability testing to validate design decisions and iterate on the solution.

**Tools Used**: Figma, Google Workspace

## FINAL DESIGN

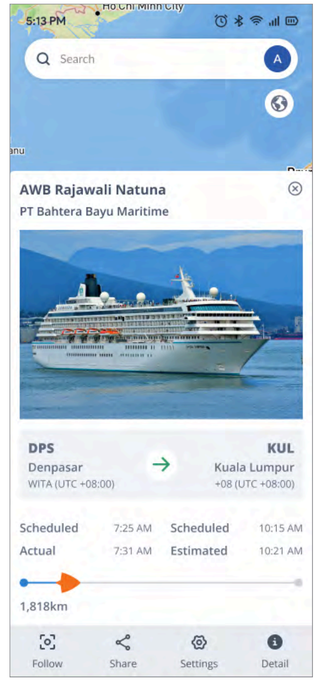

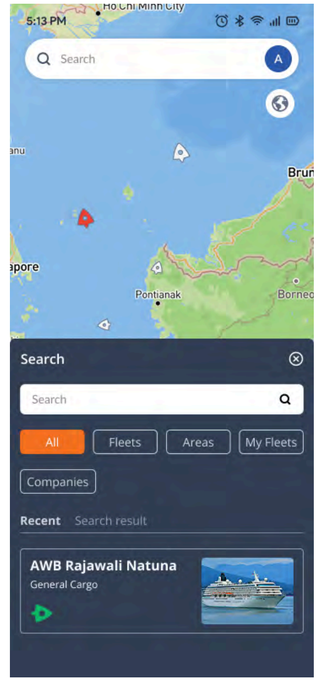

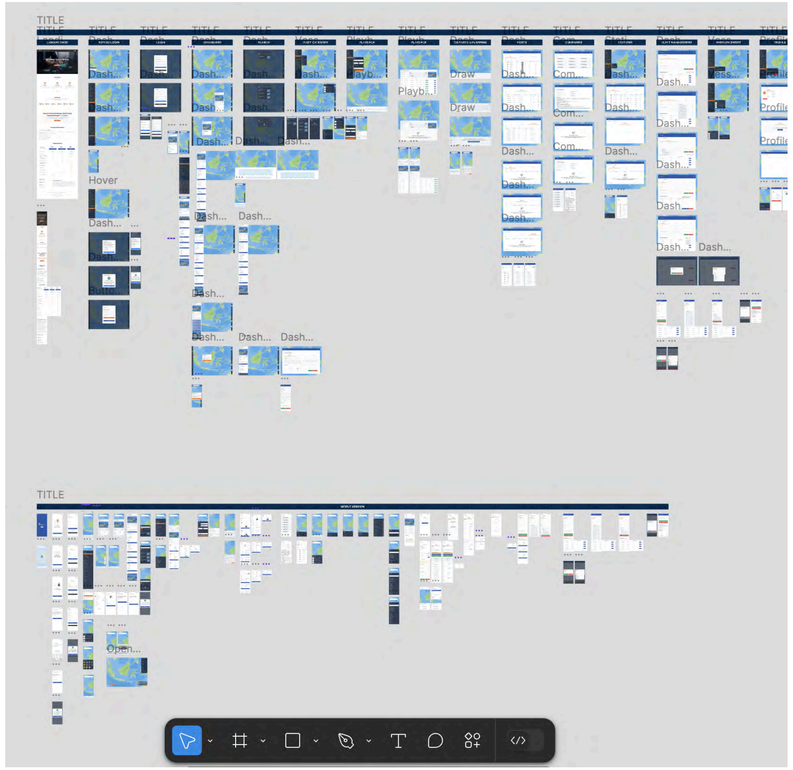

## DESIGNING AN ASSET MANAGEMENT APP – TRACKPEDIA

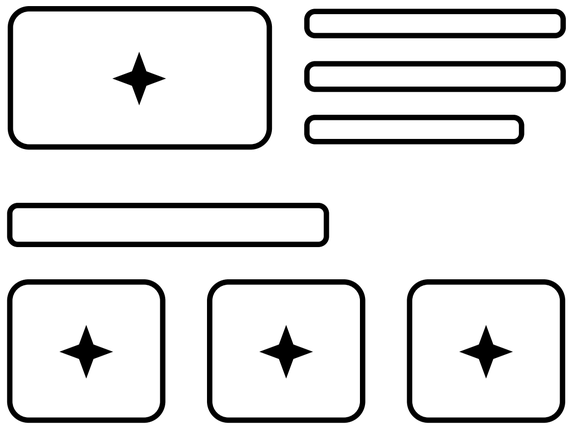

PT Linkra Wahana Teknologi is a technology solutions provider specializing in IoT and asset tracking systems. They aimed to revolutionize the way businesses manage their assets by developing Trackpedia, a web and mobile application that leverages IoT technology to provide real-time asset tracking and management.

As the UI/UX Designer for this project, I was responsible for designing an intuitive and visually appealing platform that meets the needs of businesses and asset managers, enabling them to optimize their operations and reduce costs.

# Project 7

YKK AP Web Scales — Digital Weighing Management System

## PROJECT BACKGROUND

- **Client**: Linkra. Linkra is a leading technology company specializing in innovative solutions for various industries. With expertise in industrial automation, IoT, software development, and telecommunication, Linkra is dedicated to enhancing operational efficiency and productivity.

- **Objective**: Design a user-centered web application that simplifies complex operational processes, improves task efficiency, and provides stakeholders with clear, actionable information through an intuitive and scalable interface.

- **Problem Statement** : The existing workflow relied on fragmented processes and interfaces that made daily operations inefficient. Users experienced difficulty accessing critical information, navigating complex workflows, and completing tasks efficiently. The lack of consistency across the platform also increased the learning curve for new users and reduced overall productivity.
  The challenge was to redesign the experience into a streamlined, intuitive, and scalable product that supports users in completing their tasks with greater speed, accuracy, and confidence.

## ROLE

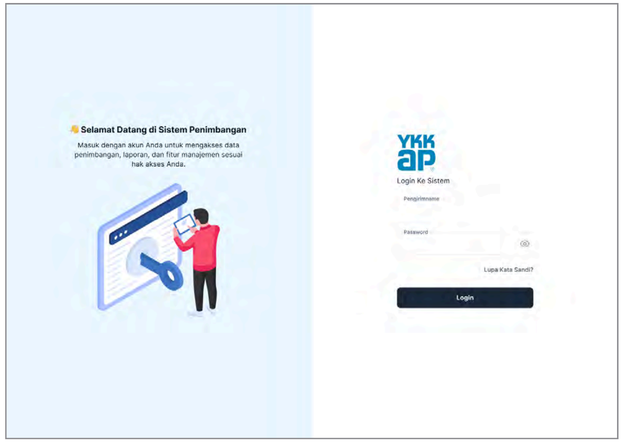

**Role**: UI/UX Designer

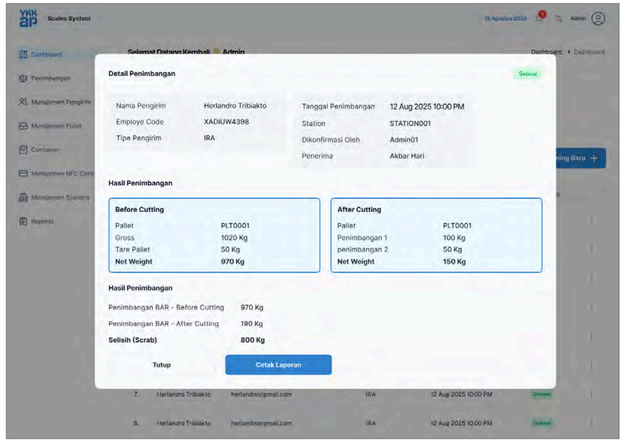

**Responsibilities**:

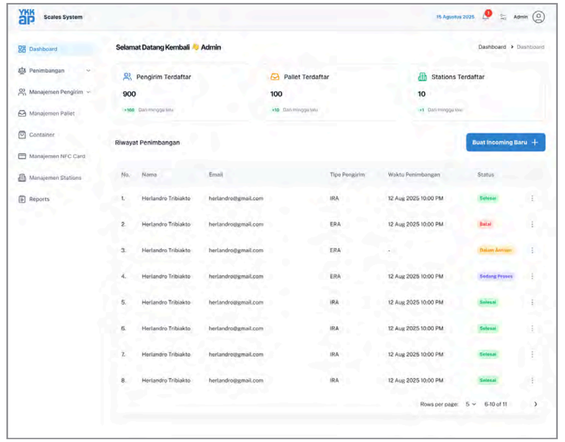

- Conducted user research to understand the needs of businesses and asset managers.
- Designed user flows, wireframes, and high-fidelity mockups for the app.
- Created interactive prototypes to demonstrate key features and user interactions.
- Collaborated with IoT developers and product managers to ensure the design aligned with technical capabilities and business goals.
- Conducted usability testing to validate design decisions and iterate on the solution.

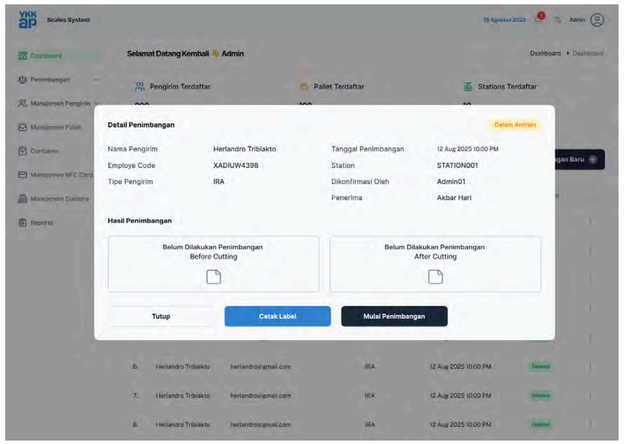

**Tools Used**: Figma, Google Workspace

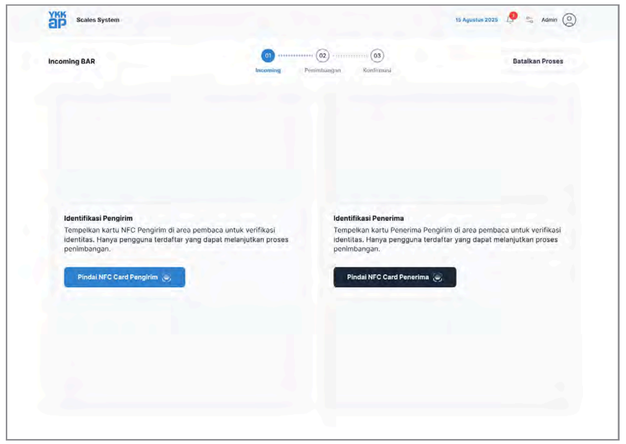

## FINAL DESIGN

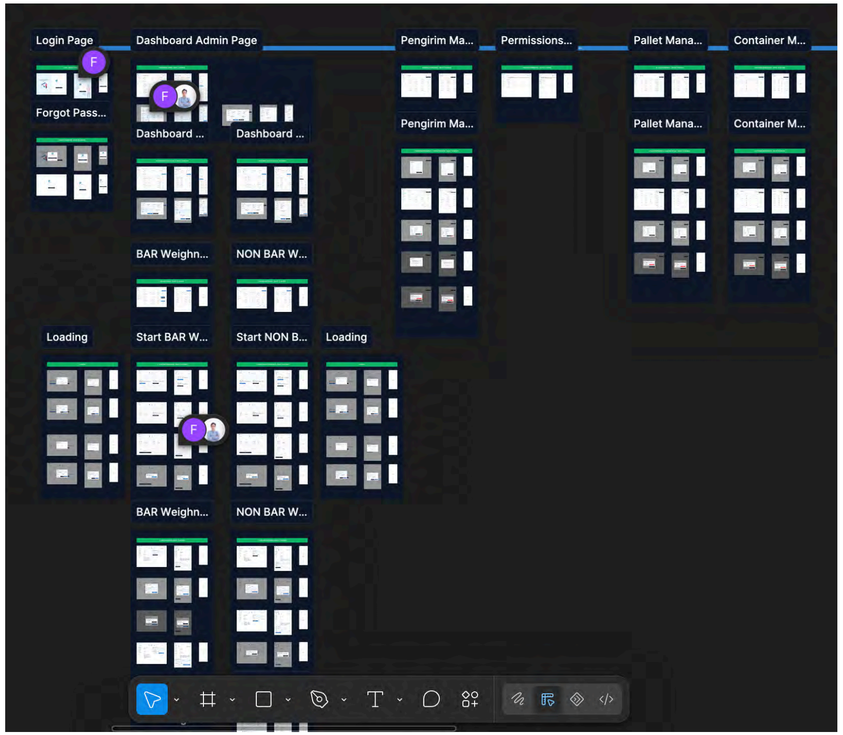

## DESIGNING AN ASSET MANAGEMENT APP – TRACKPEDIA

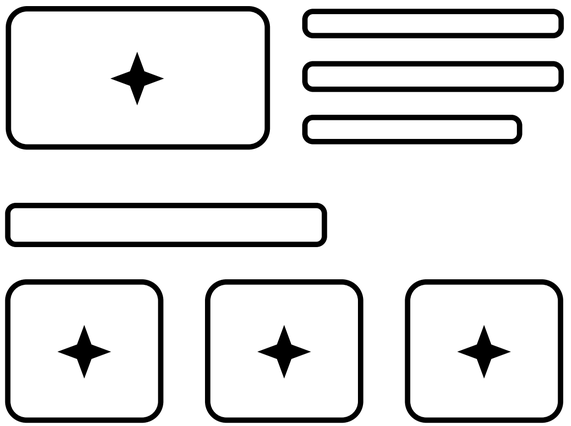

Web Scales is a web-based weighing management system developed by PT Linkra Wahana Teknologi to support industrial weighing operations through digital workflows and real-time data management.

As the Product Designer, I designed the end-to-end user experience—from workflow mapping and interface design to interactive prototypes—creating an intuitive and efficient platform that simplifies weighing processes while supporting operational productivity.

# Project 8

Website Video Learning Harisenin.com

## PROJECT BACKGROUND

harisenin.com

- **Client**: Because success is every Indonesian child's right, we are committed to providing the younger generation with access to quality education.

- **Objective**: Design an engaging and user-friendly learning video experience that improves content accessibility, enhances learning engagement, and helps users understand educational materials more effectively through clear visual communication.

- **Problem Statement** : The existing learning experience needed a more engaging and accessible way to deliver educational content through video. Users needed a clear and intuitive interface to navigate learning materials, follow video lessons, and focus on the content without unnecessary distractions. The challenge was to design a seamless video learning experience that improves content accessibility, supports effective learning, and keeps users engaged throughout their learning journey.

## ROLE

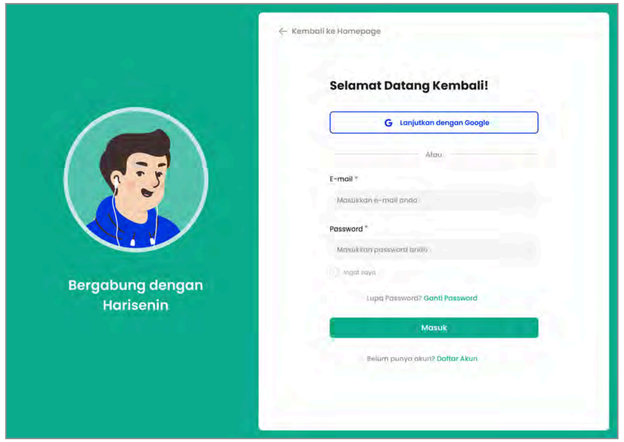

**Role**: UI Designer

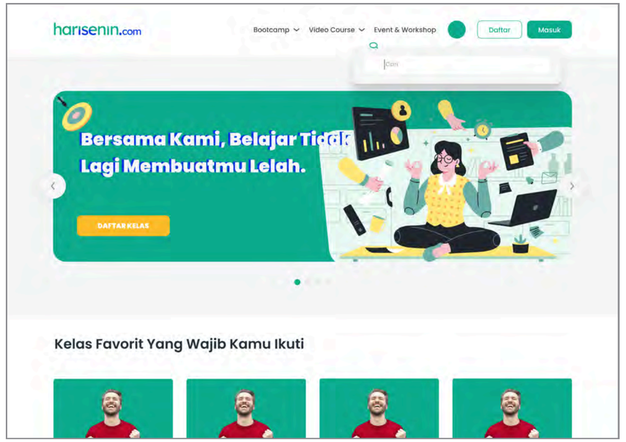

**Responsibilities**:

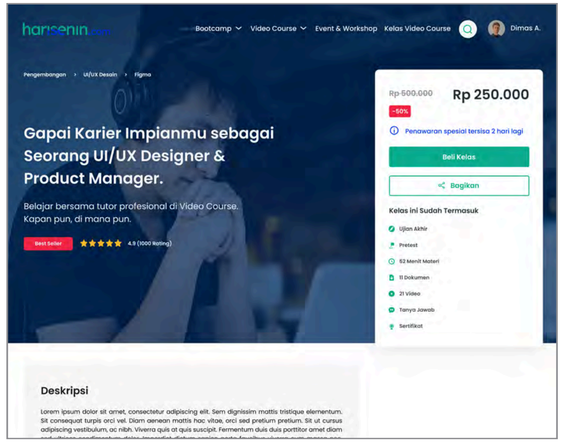

- Conducted user research to understand the needs of businesses and asset managers.
- Designed user flows, wireframes, and high-fidelity mockups for the app.
- Created interactive prototypes to demonstrate key features and user interactions.
- Collaborated with IoT developers and product managers to ensure the design aligned with technical capabilities and business goals.
- Conducted usability testing to validate design decisions and iterate on the solution.

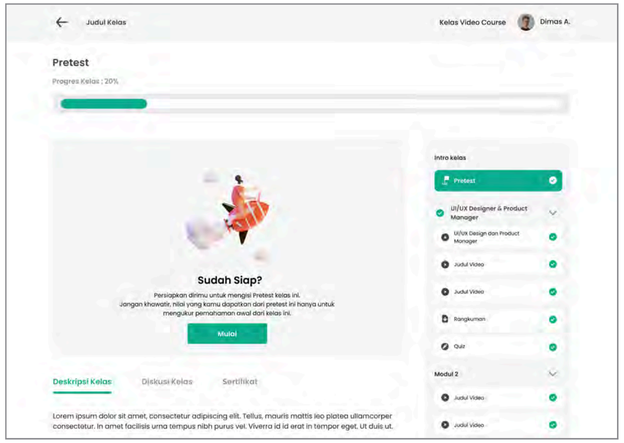

**Tools Used**: Figma, Google Workspace

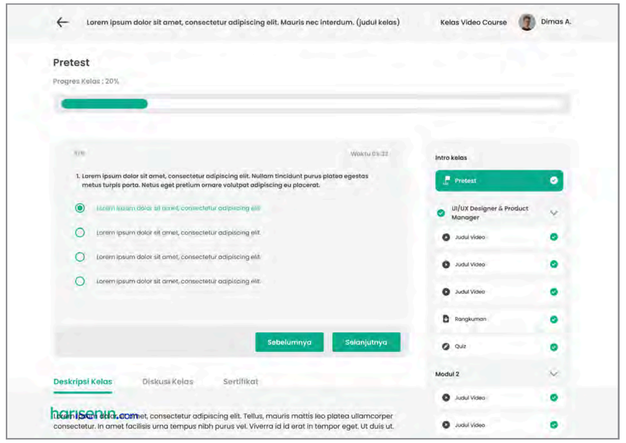

## FINAL DESIGN

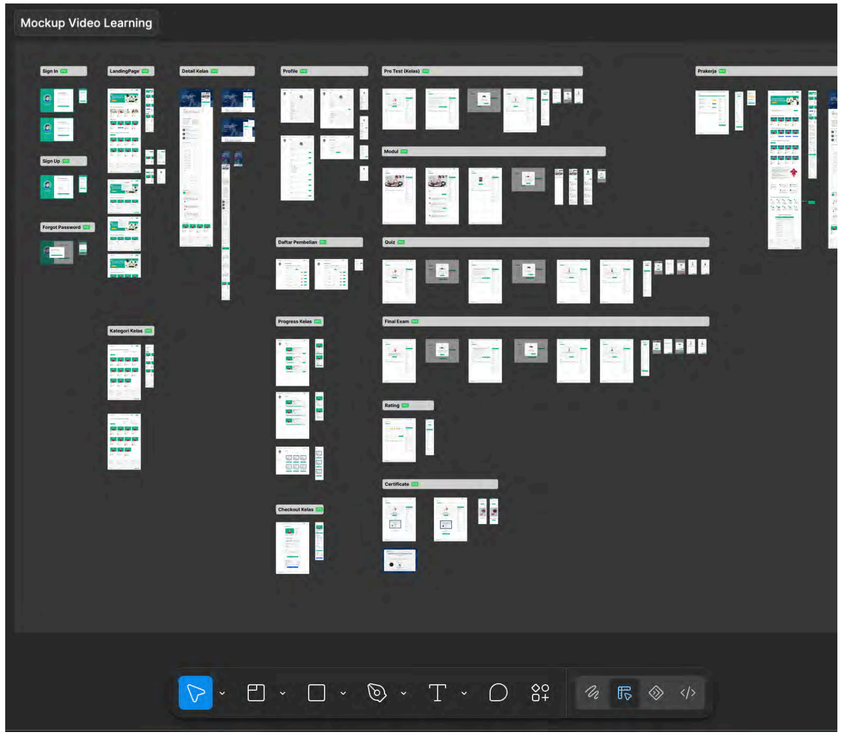

## DESIGNING A VIDEO LEARNING EXPERIENCE – HARISENIN.COM

Harisenin.com is an online learning platform that provides educational content to help users develop their skills and knowledge through digital learning experiences.

As a UI/UX Designer Intern, I designed the video learning experience to improve content accessibility, simplify navigation, and create an intuitive interface that supports a more engaging and effective learning journey.

THANK YOU
